

MODEL: 0603W2C-KHC-B

Features

- Package in 8mm tape on 7" diameter reel.
- Compatible with automatic placement equipment.
- Compatible with infrared and vapor phase reflow solder process.
- Mono-color type.
- Pb-free.
- The product itself will remain within ROHS complaint version.

Descriptions

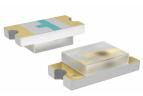

- The 0603 SMD LED is much smaller than lead frame type components, thus enable smaller
- board size, higher packing density, reduced storage space and finally smaller equipment to be obtained.
- Besides, lightweight makes them ideal for miniature applications.etc

Usage Notes:

- Surge will damage the LED
- When using LED, it must use a protective resistor in series with DC current about 20mA

Applications

- Automotive: backlighting in dashboard and switch
- Telecommunication: indicator and backlighting in telephone and fax
- Flat backlight for LCD, switch and symbol
- General use

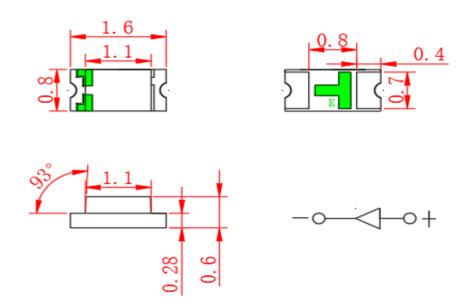

MODEL: 0603W2C-KHC-B

Device Selection Guide

1555 (1)	CI	nip		
LED Part No.	Material	Emitted Color	Lens Color	
0603W2C-KHC-B	InGaN	White	Water clear	
Color Temperature, K	7000	8000		

Package Dimensions

Notes:

- 1. All dimensions are in millimeters (inches).
- 2. Tolerance is !à 0.10 mm (.004") unless otherwise noted.

MODEL: 0603W2C-KHC-B

Absolute Maximum Rating (Ta=25°C)

Parameter	Symbol	Absolute Maximum Rating	Unit	
Peak Forward Current	Ĭ	100	mA	
(Duty 1/10 @1KHz)	I_{FP}	100	1117 X	
Forward Current	I _{FM} 20		mA	
Reverse Voltage	V_R	5	V	
Power Dissipation	P_{D}	90	mW	
Operating Temperature	Topr	-30~+85	$^{\circ}$ C	
Storage Temperature	Tstg	-40~+90	$^{\circ}$ C	
Soldering Temperature	Tsol	Reflow Soldering: 255 °C for 10sec.		
Soldering Temperature		Hand Soldering : 300 °C for 3 sec.		

Electro-Optical Characteristics (T_a=25°C)

Parameter	Symbol	Min.	Тур.	Max.	Unit	Test Condition
Luminous Intensity	Iv	400		600	mcd	IF=5mA(Note1)
Viewing Angle	$2\theta_{1/2}$		120		Deg	(Note 2)
Forward Voltage	$V_{\rm F}$	2.7		2.9	V	IF=5mA
Reverse Current	I_R			1	μΑ	VR=5V

Chromaticity Coordinates Specifications for Bin Grading

COLOR RANKS	CIE X		CIE Y	
	Min.	Max	Min.	Max
	0.302	0.304	0.316	0.318

Note:

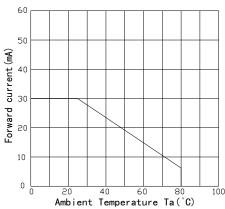

- 1. The C.I.E. 1931 chromaticity diagram (Tolerance ± 0.01).
- 2. Tolerance of Luminous Intensity $\pm 15\%$
- 3. The products are sensitive to static electricity and care must be fully taken when handling products.

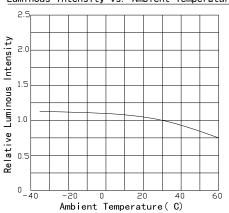

Typical Electro-Optical Characteristics Curves

Relative Intensity vs. Wavelength 1.0 0.5 0.5 Wavelength No. 500 Wavelength (nm)

Precautions For Use

1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big Current change(Burn out will happen)

2. Storage

Do not open moisture proof bag before the products are ready to use Before opening the package, the LEDs should be kept at 30° C or less and 90% RH or less The LEDs should be used within a year

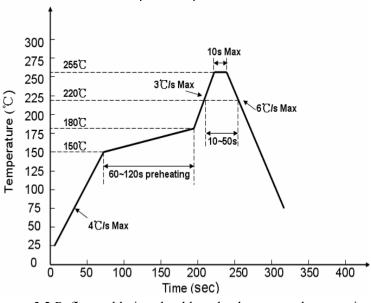

After opening the package, the LEDs should be kept at 30° C or less 70 % RH or less The LEDs should be used within 168 hours(7 days)after opening the package If the moisture absorbent material(silica gel)has faded away or the LEDs have exceeded the

Storage time, baking treatment should be performed using the following conditions

Baking treatment:60±5° C for 24 hours

3. Soldering Condition

Pb-free solder temperature profile

- 3.2 Reflow soldering should not be done more than two times
- 3.3 When soldering, do not put stress on the LEDs during heating

After soldering, do not warp the circuit board

MODEL: 0603W2C-KHC-B

4. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 280° C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder

5. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing
