Feature	特征

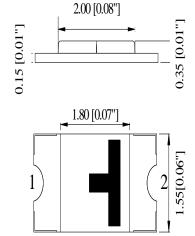

- *Low power consumption
- *Long life-solid state reliability
- *Available on tape and reel
- *RoHS compliant

Package outline dimensions

Note:

- 1. All dimensions are in millimeters (mm);
- 2. X.X is \pm -0.1mm,X.XX is \pm -0.05mm unless otherwise noted;
- 3. The device has a single mounting surface, the device must be mounted according to the specifications.

Selection Guide

Part No.	Emitted Color	Resin color	Viewing Angle 2θ _{1/2}
1206YGI-001	Yellow Green	Water transparent	130°

Absolute Maximum Ratings at Ta=25℃

Parameter	Symbol(符号)	Value(数值)	Unit(单位)
Power dissipation	Pd	70	mW
DC Forward Current	If	30	mA
Peak Forward Current ⁽¹⁾	Ifp	70	mA
Reverse Voltage	Vr	5	v
Electro-Static-Discharge ⁽²⁾ (HBM)	ESD	1000	v
Operating Temperature	Topr	-25to+85	C
Storage Temperature	Tstg	-40to+100	C
Lead Solder Temperature	Tsol	250 for 5sec	°C

Notes:

- 1. 1/10 duty cycle,0.1ms pulse width
- 2. The products are sensitive to static electricity and must be carefully taken when handling products.

Electrical/Optical Characteristics Ta=25℃

Parameter	Symbol	Condition	Value		TI-s:4	
rarameter			Min.	Тур.	Max.	Unit
Forward voltage	VF	If=20mA	1.8		2.4	V
Luminous intensity	IV	If=20mA	32	50		mcd
Dominant wavelength	WLD	If=20mA	566		576	nm
Peak wavelength	WLP	If=20mA		573		nm
Reverse current	Ir	Vr=5V			10	μА

Notes:

1. Forward voltage: $\pm 0.1V$

2. Dominant Wavelength: ±1nm

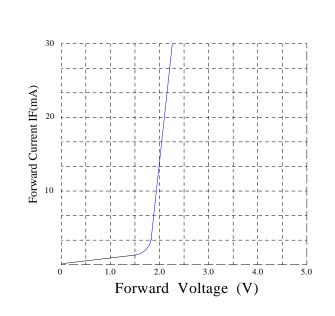

3. Luminous intensity: $\pm 10\%$

Precautions

1. Requirements for application and reflow soldering:

Use the recommended curve in the under figure of Pb-free reflow soldering.

☆Notes for reflow soldering:

- 1) No more than twice for reflow soldering.
- 2) To ensure the quality of our LEDs, please do not put pressure on the lens of LEDs.
- 3) Please choose the right nozzle to avoid the damage to products due to the pressure.
- 4) Please put on the antistatic hand loop during the use. The worktable should be with antistatic finish. The equipments must be contacted with ground

☆Handwork soldering:

- 1) During the soldering, the electronic soldering iron must be kept under the temperature of 350°C and the soldering time must not be beyond 3 seconds. No touch between the electronic soldering iron and colloid.
- 2) Handwork soldering is only allowed once. We won't take responsibility for more than that.
- 3) Avoid using sharp objects to compress products Colloidal Part directly.
- 4) Please put on the antistatic hand loop during the use. The worktable should be with antistatic finish. The equipments must be contacted with ground.

2. Storage

- ☆Moisture proof and anti-electrostatic package with moisture absorbent material is used to keep moisture to a minimum.

 Before opening the package, the product should be kept at 30°C or less and humidity less than 60%RH ,and be used in six months.
- ☆After opening the package, the product should be stored at 30°C or less and humidity less than 10%RH, and be soldered within 24 hours. It is recommended that the product be operated at the workshop condition of 30°C or less and humidity less than 60%RH.
- ☆If the moisture absorbent material has fade away or the LEDs have exceeded the storage time, baking treatment should be performed based on the following condition(75±5) °C for 24 hour。

3. Static electricity

☆Static electricity or surge voltage damages the LEDs .Damaged LEDs will show some unusual characteristic such as the forward voltage comes lower, or the LEDs do not light at the low current .even not light.

All devices, equipment and machinery must be properly grounded. At the same time ,it is recommended that wrist bands or

anti-electrostatic gloves, anti-electrostatic containers be used when dealing with the LEDs .

4. Vulcanization

★LED curing is due to sulfur being in bracket and the +1 price of silver in the chemical reaction generated Ag2S in the process It will lead to the capacity of reflecting of silver layer reducing, light color temperature drift and serious decline, Seriously affecting the performance of the product. So we should take corresponding measures to avoiding vulcanization, Such as to avoid using sulphur volatile substances and keeping away from high sulphur content of the material.

5. Safety advice for human eyes
☆Viewing direct to the light emitting center of the LEDs, especially those of great luminous Intensity will cause great hazard to
human eyes .Please be careful.
6. Design consideration
☆In designing a circuit about LED, the current through each LED must not exceed the absolute maximum rating specified for
each LED. In the meanwhile, resistors for protection should be applied, otherwise slight voltage shift will cause big current
change, burn out may happen.
